

Did You Know?

Alcohol affects youth differently than adults!

- The brain goes through rapid change between the ages of 10 and 21. Drinking alcohol before age 21 can cause lifelong damage to brain function, especially memory, motor skills (ability to move), and coordination.
- Your brain will not finish developing until age 25!
- Underage drinking can lead to alcoholism (when you want to stop drinking, but can't). If you drink alcohol before age 15, you are 4 times more likely to develop alcoholism at some point in your life.
- Approximately 10,000 people are killed in drunk driving accidents in the U.S. each year.
- Riding with a driver who has been drinking alcohol is a dangerous choice! Even if you haven't been drinking, you could still end up injured or killed in a drunk driving crash.

What can alcohol do to you?

- Trouble at home or school
- Social problems
- Problems with making and working towards goals
- Risk of injuries, falls, and drowning
- Depression & suicidal thoughts
- Aggression/violence
- Death from alcohol poisoning

*Remember:
Alcohol is a drug.
Don't drink drugs!*
